## Course description

Anatomical Specimen Course on Complex Elbow Fractures and Instability.

The course includes open group discussions moderated by experts providing an overview of current subject knowledge, and a significant amount of time will be devoted to practical exercises. Personal experiences will be expressed and treatment methods for particular problems presented and discussed.

## Target participants

Participants should have completed the AO Trauma Course—Basic Principles and Advanced Principles of Fracture Management. Participants must be actively involved in trauma management and preferably in trauma surgical care. The course is aimed at experienced surgeons who are willing to share and express their experiences with other participants and specialists in the field. Past experience in the field of musculoskeletal trauma is mandatory.

## Course fee

EUR 750 Non-member

EUR 675 for Paid member

For more information and registration, please visit:

## Learning objectives

At the end of the course, participants should be able to:

- Refresh and improve their knowledge on specific anatomy and biomechanics
- Assess complex elbow trauma including severe fractures and ligamentous injuries
- Determine appropriate approaches in relation to relevant anatomic structures, adequate to approach the specific injury pattern
- Formulate a sequential treatment plan for complex injuries of the elbow and forearm
- Determine the most appropriate indications for different types of implants and different types of prostheses
- Identify and manage early and late complications associated with complex elbow injuries
